## Engineering and Infrastructure Disputes

Dispute resolution has been a core area of practice throughout the development of JunHe. JunHe's dispute resolution legal team provides both constructive and actionable dispute prevention, and develops case-by-case response strategies and litigation/arbitration resolution. For cases that have entered formal legal procedures, JunHe's lawyers represent clients in the entire process of litigation/arbitration procedures including pretrial investigations, applications for evidence/property preservation measures/injunctions, initiation of litigation/arbitration procedures and applications for enforcement to protect the legitimate rights and interests of their clients.

Our attorneys have graduated from the top law schools both at home and abroad. Many are ex-judges or have been recruited from leading litigation firms. Our litigators have extensive experience appearing before courts at various levels and well-known arbitration tribunals, and offer clients an in-depth understanding of the Chinese legal system and judicial practices. Many of our partners regularly serve as arbitrators with the world's most prestigious arbitration institutions and have significant experience in international commercial arbitration. Our team includes many lawyers who are qualified to practice concurrently in China as well as in the U.S., Hong Kong and other jurisdictions. Our team works in multiple languages such as Chinese, English, French and Japanese. We provide clients with high quality dispute resolution services that span borders, languages and industries.

With the rapid development in overseas investment, domestic engineering, energy and infrastructure projects, as well as the combining of engineering with project investment, finance and M&As, and the changes in the application and management modes of various transaction structures, disputes in the fields of engineering and infrastructure have become more and more complicated. They are increasingly characterized by their diversity of subjects and legal relationships.

Our attorneys currently provide legal services in domestic engineering litigation and arbitration at CIETAC, Beijing International Arbitration Center and Shanghai International Arbitration Center. We also represent clients in handling large and complex engineering and infrastructure disputes at international arbitration institutes such as ICC, LCIA, Singapore International Arbitration Center and Hong Kong International Arbitration Center. Legal services for engineering disputes extend from single engineering and design contract disputes to investment and financing disputes such as project financing and PPP disputes, new energy project M&A disputes, engineering guarantee disputes, engineering insurance disputes and other disputes with more complex engineering and infrastructure characteristics.

JunHe, founded in Beijing in 1989, is one of the first private partnership law firms in China. Since its establishment, JunHe has grown to be a large and recognized Chinese law firm. The firm has fifteen offices around the world and a team comprised of more than a thousand professionals.

The team (JunHe) has rich project experience, strong professional ability, high coordination and the ability to understand our business.

**Advised a PRC port company on EPC contract disputes**

JunHe provided agent services for a leading grain port company in Northern China in a dispute resolution of the turnkey contracts for the port and terminal construction projects with the UK general contractor.

The achievements of our infrastructure and project financing team can be seen in many recent investments and developments such as the building of roads, bridges, water and power facilities that cover basic public needs. It is also reflected in the rise of environmental protection to improve the quality of life. The attracting of foreign investment, the adoption of project financing and the PPP model all point to the team's development. Other noteworthy developments include the rise in the "going out" of Chinese enterprises, the gradual implementation of the "One Belt One Road" initiative, and the necessary adjustments undertaken in the development of "dual circulation".
