Cybersecurity and Data Protection Issues for Enterprises in the Health and Medical Fields

In addition to the general personal information, important data, core data and cybersecurity protection obligations stipulated under Personal Information Protection Law, Data Security Law, Cybersecurity Law and its supporting regulations, health and medical enterprises also face more stringent and targeted regulations affecting medical big data, medical records and human genetic resources. These regulations bring challenges to health and medical enterprises in areas such as data collection, processing, usage, transfer, sharing, cross-border transmission, clinical trials, technology development, and international cooperation. With developments in medical big data, the increasing use of online medical treatment platforms and tools, and the deepening of the application of medical AI, healthcare enterprises face unique issues and challenges in complying with these new data and cybersecurity regulations.

JunHe provides legal services on data protection and cybersecurity to several life health and medical companies, based on the latest developments in the industry. The breadth and depth of legal services required by health and medical companies continues to expand. This includes the collection and usage of the personal information of patients and clients in daily business, compliance analysis for business cooperation, the drafting and revision of data transfer agreements, and daily staff training. There are also concerns around the use of third-party databases in pharmaceutical economics, the development of medical AI projects, and international cooperation on research and development. We have a wealth of experience in assisting companies to deal with legal issues in daily business, cutting-edge technologies and new business development, and we can assist companies in exploring their legal requirements and propose constructive solutions.

We Provide the Following Services:

Data examination and compliance advice:

- Providing comprehensive data combing services for health and medical enterprises;
- On the basis of data combing, assisting health and medical enterprises in implementing comprehensive compliance in the fields of data and cybersecurity.

Compliance advice on the special requirements for health and medical enterprises, and assisting in applying for government approvals, such as:

- Conducting legal compliance analysis on data collection, data use and data sharing, etc., based on the requirements of population health information and health care big data, medical record management, human genetic resources information management, clinical trial quality management, biomedical research ethics management, etc.;
- Providing legal advice in the fields of data and cybersecurity for Internet hospital preparation and operation;
- Drafting relevant informed consent forms for the collection of personal information and medical data in the course of daily business, in order to meet the regulatory requirements for the collection of medical and health data;
